#### Upgrading from a Previous Version

New versions of XenData software can be used by any customer who has valid software maintenance in place on the effective release date.

To upgrade from a previous version of XenData Workstation software please follow these steps:

- Uninstall the current software using Add/Remove Programs
- Reboot the computer
- Download the new workstation installation program
- Run the new installer
- Reboot the computer after successful completion of the installation wizard.

Index information about off-line tapes and license information will be maintained from the previous version.
